

se PC score plots using significant features after preproc
overall differences between groups using PC1 and PC3 in
one-way ANOVA model=0

se PC score plots using significant features after preproc
overall differences between groups using PC2 and PC3 in
one-way ANOVA model=0.039

PC1 scores distribution (25th percentile, median, 75th percentile)
in each group using significant feats vs factors ($p=0$)

PC2 scores distribution (25th percentile, median, 75th percentile)
in each group using significant feats vs factors ($p=0.014$)

PC3 scores distribution (25th percentile, median, 75th percentile)
in each group using significant feats vs factors ($p=0.499$)

PC4 scores distribution (25th percentile, median, 75th percentile)
in each group using significant feats vs factors ($p=0.536$)

PC5 scores distribution (25th percentile, median, 75th percentile)
in each group using significant feats vs factors ($p=0.657$)

PC6 scores distribution (25th percentile, median, 75th percentile)
in each group using significant feats vs factors ($p=0.316$)

PC7 scores distribution (25th percentile, median, 75th percentile)
in each group using significant feats vs factors ($p=0.931$)

PC8 scores distribution (25th percentile, median, 75th percentile)
in each group using significant feats vs factors ($p=0.988$)

PC9 scores distribution (25th percentile, median, 75th percentile)
in each group using significant feats vs factors ($p=0.904$)

PC10 scores distribution (25th percentile, median, 75th percentile)
in each group using significant feats vs factors ($p=0.943$)
